

Try this command:

```
```$ git remote get-url --all origin```
```

This will show you the remote url you are using to push, if the url contains your old PAT, if it didn't, you can still update it to bear your PAT so git will not prompt you for password.

Using the command below:

```
```$ git remote set-url origin https://<PAT>@github.com/<username>/<repository>.git```
```

Replace:

<PAT> with your token,

<username> your username

<repository> your repo name
